

DOORS

Data Orchestration and On-demand Reporting System

Document Download Services and SDK

DOORS Integration

Document ID	Version	Audience	Classification
DOORS-DOCUMENT-DOWNLOAD-SERVICES-SDK	1.0	Data Manager and API User	NIC INTERNAL

Document control

Field	Value
Title	Document Download Services and SDK
Owner	DOORS Product Governance
Version / status	1.0 / Approved for initial publication
Effective date	30 August 2026
Review cycle	At every material release or annually
Audience	Data Manager and API User
Authoritative source	Current DOORS release, configuration and governance records

Publication rule

Use the authenticated DOORS Documentation Hub as the source of truth. Downloaded copies may become obsolete after a release, security change or policy revision.

Governed chain

API key -> mapped ClientName -> document service -> manifest query -> authorized GePNIC instance -> per-document eligibility.

- The caller never supplies unrestricted downstream parameters.
- The manifest returns opaque governed operations.
- The service revalidates policy before retrieval.

Streaming and integrity

Upstream content is spooled without full-file memory retention and streamed to the SDK. The SDK writes a .part file, hashes bytes and atomically renames only after checksum match.

- X-DOORS-SHA256 carries the source checksum.
- X-Correlation-ID links download and receipt.
- Zero-byte and mismatched files are rejected.
- Destination verification is recorded in document_download_audit.

Audit fields

Area / symptom	Control / response
Who	ClientName, service, query, agent
What	Document type/code, download ID, exact filename, byte count
Decision	Eligibility mode, policy code/version, outcome/status
Integrity	Source SHA-256, destination SHA-256, verified flag
Timing	Started/completed timestamps, duration, receipt timestamp
Failure	Sanitized code/message and correlation ID

Operations

- Use Download Logs without filters for latest-to-old review.
- Filter by client, service, outcome, integrity and date.
- Investigate mismatch, failed and awaiting-receipt outcomes.
- Batch ZIP design must include a per-file success/failure manifest.

Review and assurance checklist

The document owner and reviewer must complete this page before approving a revision for publication.

- Technical statements match the currently deployed release and approved configuration.
- Role scope and segregation-of-duties boundaries are accurate.
- Examples contain no credentials, private keys, sensitive records or exploitable internal details.
- Endpoints, error meanings, limits and operational actions have been tested where applicable.
- Related test cases, runbooks and release notes have been updated.
- The authenticated Documentation Hub contains the approved version and supersedes downloaded copies.

Approval record

Record the document version, reviewer, approval reference and effective date in the governed release record. Do not add handwritten approval data to uncontrolled downloaded copies.
