

DOORS

DATA ORCHESTRATION & ON-DEMAND REPORTING SYSTEM

Secure Data. On demand data sharing/viewing. Fully governed.

Turn distributed data into approved, auditable APIs and interactive reports - without exposing databases or building a new endpoint for every request.

SHARE DATA FASTER. STAY SECURE. REMAIN IN CONTROL.

DOORS enables secure, governed data sharing across distributed systems - without direct database access, repetitive API development or fragmented integrations.

ZERO-TRUST ACCESS

RBAC, approvals, API keys, IP whitelisting, PKI and optional encrypted payloads.

CENTRAL GOVERNANCE

Approve requests and SQL templates once; map them to authorized users, clients and remote agents.

DATA, TWO WAYS

Deliver governed data through interactive reports or integration-ready APIs.

DISTRIBUTED BY DESIGN

Agent-led execution keeps data sources decoupled while one console governs multiple locations.

ONE CONSOLE. END-TO-END CONTROL.

Requests | Templates | Agents | Clients | Reports | Audit

Built for enterprise adoption

- Open standards, open-source stack
- Java 21 + Spring Boot 3
- Vue.js 3 + PostgreSQL 15+
- Container-ready deployment

FROM DATA REQUEST TO TRUSTED DELIVERY

READY TO OPEN THE DOOR TO TRUSTED DATA?

Request a live demo and explore an adoption pathway for your data ecosystem.
