

DOORS

ROLE-BASED ACCESS CONTROL + LAYERED SECURITY

The right access. The right protection.

Give every user exactly what they need - while protecting every session, connection and data exchange.

GOVERNED BY DESIGN

FOUR ROLES. CLEAR RESPONSIBILITIES.

Separation of duties turns access control into accountable action.

DM

DATA MANAGER

GOVERNS + APPROVES

Controls approvals, SQL templates, user/client mappings, API clients and platform governance.

EU

EXTERNAL USER

REQUESTS + CONSUMES

Submits data requests and accesses approved data through reports or authorized APIs.

DV

DEVELOPER

BUILDS + TESTS

Creates parameterized SQL templates, validates them and submits them for approval.

DR

DATA VIEWER

VIEWS + ANALYZES

Views authorized data through the interactive reporting experience.

SECURITY AT EVERY LAYER

Defense-in-depth from user access to API consumption.

SECURE SESSION HANDLING

Controlled sessions help protect authenticated user activity.

UI RATE LIMITING

Controls repeated portal requests and reduces abusive access patterns.

ENCRYPTED DATA IN TRANSIT

UI-to-backend communication is protected while data moves.

API RATE LIMITING

Protects automated interfaces with dedicated consumption controls

PKI DATA SIGNING

Digital signatures support authenticity and integrity verification.

CONTROL WHO CAN ACT. PROTECT HOW DATA MOVES. VERIFY WHAT IS DELIVERED.

SEE DOORS SECURITY IN ACTION

Request a live demo of role workflows, governance controls and protected data delivery.
