Data Orchestration and On-demand Reporting System

Release Notes, Known Issues and Change Log

DOORS Reference

Document ID	Version	Audience	Classification
DOORS-RELEASE-NOTE S-KNOWN-ISSUES	1.0	All authenticated users	NIC INTERNAL

Document control

Field	Value
Title	Release Notes, Known Issues and Change Log
Owner	DOORS Product Governance
Version / status	1.0 / Approved for initial publication
Effective date	30 August 2026
Review cycle	At every material release or annually
Audience	All authenticated users
Authoritative source	Current DOORS release, configuration and governance records

Publication rule

Use the authenticated DOORS Documentation Hub as the source of truth. Downloaded copies may become obsolete after a release, security change or policy revision.

Release 1.0 documentation baseline

Introduces the role-aware Documentation Hub, authenticated document delivery, role manuals and controlled technical references.

- Documentation is searchable by title, category and topic.
- Each document declares audience, version and review controls.
- Static public PDF delivery is retired.

Current platform highlights

- Governed request-to-query workflow.
- Distributed agent execution and interactive reports.
- API client registry with certificate-based encrypted responses.
- Document service registry, streaming downloads, checksums and audit reporting.
- Security Administrator and Data Manager separation.

Known limitations / planned controls

- Batch ZIP download requires a per-file manifest before production enablement.
- FUNCTION eligibility rollout requires immediate per-document recheck.
- Production SDK packages must complete removal of embedded API-key material.
- Operational values and screenshots require review after every UI/configuration release.

Change process

Every release entry should include date, version, affected roles, migrations, security impact, compatibility, rollback considerations and known limitations.

Review and assurance checklist

The document owner and reviewer must complete this page before approving a revision for publication.

- Technical statements match the currently deployed release and approved configuration.
- Role scope and segregation-of-duties boundaries are accurate.
- Examples contain no credentials, private keys, sensitive records or exploitable internal details.
- Endpoints, error meanings, limits and operational actions have been tested where applicable.
- Related test cases, runbooks and release notes have been updated.
- The authenticated Documentation Hub contains the approved version and supersedes downloaded copies.

Approval record

Record the document version, reviewer, approval reference and effective date in the governed release record. Do not add handwritten approval data to uncontrolled downloaded copies.
